COMMISSION
OF LATVIA

- 1. Legal background of Energy Prosumers**
- 2. Energy Prosumer tariffs**
- 3. Support schemas**

Electricity market Law:

active user - end user who uses the self-produced electricity for self-consumption of the active user and the electricity (surplus) not immediately consumed can be transferred or sold to an electricity trader or used for participation in flexibility or energy efficiency schemes.

Energy Prosumer tariffs

Electricity market Law sets, that:

- *Differences in the tariffs of the distribution system services shall be permitted between voltage, capacity, electricity consumption, levels of electricity transferred to the network or electricity customer profiles if they are **economically justified and the same for all group customers of the relevant level.***
- *The system operator whose system has more than one hundred thousand users is entitled to **charge** the users of the net accounting system a **fee for the administration of the net accounting system** in order to compensate for the costs related to the operation of the net electricity accounting system. The **fee calculated by the system operator and is approved by the Regulator.***

Energy Prosumer tariffs

- No additional tariff for Energy Prosumers:
 - ✓ *tariff consists of two parts – fixed and variable*
 - ✓ *tariff fixed part is set around 50%*
 - ✓ *tariff for users with installed capacity 25A – 20 EUR/ month*
- Tariffs are set for electricity producers – no applied for system users with installed electricity capacity till 11,1 kW (microgenerators).

Support schemas

- Net metering:
 - ✓ 12 months period
 - ✓ According to last amendments in law – users can apply for net metering system till 30.aprill 2024. – and the system will work only some years.
- Net billing – the detailed regulation is under developments. Basic principles are set in Electricity market law.
